

Nano anti-fouling Sanitary Ceramic Ware

Properties of products

- Making Anti-fouling properties of nano-structures by surface-coating with nano paint.
- The surface has the features of hydrophobicity and anti-fouling after coating. The surface tension of the liquid on the surface is such as lotus effect , and the dirt cannot be adhered, making it easy to clean and maintain, and increasing the service life of the product.
- After more than 2000 times of brushing, the original anti-fouling properties can still be maintained, but the anti-fouling properties will be low with the time and frequency of use, and it is not permanent. After the anti-fouling property is reduced, it must be repainted.

Features

properties	Technological capability
Nano products	Better anti-fouling 、 Antibacterial 、 Deodorization
Normal products	Anti-fouling

Applications of products

Coating nano paint on the surface of Sanitary Ceramic Ware to achieve anti-fouling, antibacterial and easy to clean.

Recognized product information :

Certification Specifications : TN-008 Certification Specifications of Nano Finishing Anti-fouling Sanitary Ceramic Ware
